DETAILED ACTION

Claim Objections

1. Claim 2 is objected to because of the following informalities: on line 13, page 25, claim 2 recites "whereby upon removing loading said compressed shot shell..." which is grammatically incorrect. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless – (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee et al (5,284,274).

In regards to claim 1, Lee et al teaches a shot shell having first and second ends and a length (figs. 6a-6c), comprising: a compressible portion (112) situated at said first end of said shot shell; whereby, upon loading said shot shell into a magazine of a firearm (fig. 7), said compressible portion is capable of being compressed so as to decrease the length of said shot shell, thereby increasing the magazine capacity of said firearm, thereby providing a compressed shot shell (col. 4, lines 15-25).

In regards to claim 2, lee et al teaches upon removing loading said compressed shot shell from the magazine of the firearm, said compressible portion un-compresses so as to increase the length of said shot shell.

Art Unit: 3641

In regards to claim 3, the shot shell has a load end wherein a load is situated, and wherein said compressible portion is inherently removably adhered to said load end of said shot shell (figs. 6a-6c).

Allowable Subject Matter

4. Claims 4-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 14-24 are allowed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Moore (5,171,934) teaches a shotshell (40) having first and second ends and a length (fig. 3a) wherein the shotshell comprises a decreased length of said shot shell, thereby increasing the magazine capacity of said firearm, thereby providing a compressed shotshell (col. 4, lines 1-5).

Tougeron et al (5,565,649) teaches a shell (2) having first and second ends and a length, comprising: a compressible portion (51) situated at said first end of said shot shell (figs. 5&6).
